```
useful for reducing serum cholesterol in a subject (including a mammal such as a mouse, rat, rabbit, cow, sheep, pig, human, monkey, ape, chimpanzee or orangutan); for treating coronary artery disease, dysbetalipoproteinaemia or atherosclerosis; and for reducing the risk of myocardial infarction or stroke; for breaking an embolus in the subject, and also for treating angina. The synthetic apolipoprotein. E mimicking polypeptide enhances binding of low-density lipoprotein (LDL) or very low density lipoprotein (VLDL) to a cell and enhances degradation of LDL or VLDL by a cell. This sequence represents a synthetic apolipoprotein. E mimicking mimicking polypeptide of the invention.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                    (without alignments)

Sequence 242, Application US/09453833

Patent No. 6602854

GENERAL INFORMATION:
APPLICANT: Baseaux, Jean-Louis
APPLICANT: Bettner, Klaus
APPLICANT: Gornut, Isabelle
APPLICANT: Buttner, Gunther
APPLICANT: Difourcq, Jean
TITLE OF INVENTION: APOLIPOROTEIN A-1 AGONISTS
TITLE OF INVENTION: APOLIPOROTEIN A-1 AGONISTS
TITLE OF INVENTION: APOLIPOROTEIN A-1 AGONISTS
MUMBER OF SEQUENCES: 258
CORRESPONDENCE ADDRESS:
ADDRESSEE: Pennie & Edmonds LLP
GENERAL INFORMATION:
APPLICANT: Desseux, Jean-Louis
APPLICANT: Sekul, Renate
APPLICANT: Buttner, Klaus
APPLICANT: Buttner, Klaus
APPLICANT: Metz, Gunther
APPLICANT: Metz, Gunther
APPLICANT: Difourcq, Jean
TITLE OF INVENTION: AND THEIR USE TO TREAT DYSLIPIDEMIC DISORDERS
NUMBER OF SEQUENCES: 258

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Description
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 1

apolipoprotein-E mimicking polypeptide useful for treating utery disease, dysbetalipoproteinemia or atherosclerosis an amino acid sequence. artery

SEQ ID NO 115; 79pp; English.

The invention relates to a novel synthetic apolipoprotein-E mimicking polypeptide. The invention further comprises an isolated nucleic acid encoding the synthetic apolipoprotein-E mimicking polypeptide; a vector, a host cell, a recombinant cell or a transgenic, non-human subject (including animal or plant) comprising the synthetic apolipoprotein-E mimicking polypeptide encoding polypuocleotide; a composition comprising the synthetic apolipoprotein-E mimicking polypeptide and a carrier; and an monoclonal antibody that specifically binds to the synthetic

```
apolipoprotein-E mimicking polypeptide. The synthetic apolipoprotein-E mimicking polypeptide has the following activities antilipaemic, cardiant, vasotropic, antiarteriosclerotic, cerebroprotective, and antianginal. The synthetic apolipoprotein-E mimicking polypeptide is useful for reducing serum cholesterol in a subject (including a mammal such as a mouse, rat, rabbit, cow, sheep, pig, human, monkey, ape, chimpanzee or orangutan); for treating coronary artery disease, dysbetalipoproteinaemia or atherosclerosis; and for reducing the risk of myocardial infarction or stroke; for breaking an embolus in the subject; and also for treating angina. The synthetic apolipoprotein-E mimicking polypeptide enhances binding of low-density lipoprotein (UDL) or a cell and enhances degradation of LDL or Ville by a cell. This sequence represents a synthetic apolipoprotein-E
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           mimicking polypeptide of the invention.

Synthetic apolipoprotein-E mimicking polypeptide useful for treating coronary artery disease, dysbetalipoproteinemia or atherosclerosis comprises an amino acid sequence.

Claim 4; SEQ ID NO 116; 79pp; English.

The invention relates to a novel synthetic apolipoprotein-E mimicking polypeptide. The invention further comprises an isolated nucleic acid encoding the synthetic apolipoprotein-E mimicking polypeptide; a vector, a host cell, a recombinant cell or a transgenic, non-human subject (including animal or plant) comprising the synthetic apolipoprotein-E mimicking polypeptide encoding polyynucleotide; a composition comprising the synthetic apolipoprotein-E mimicking polypeptide and a carrier; and an monoclonal antibody that specifically binds to the synthetic apolipoprotein-E apolipoprotein-E mimicking polypeptide. The synthetic apolipoprotein-E

ö cardiant, vasotropic, antiarteriosclerotic, cerebroprotective, and antianginal. The synthetic apolipoprotein-E minicking polypeptide is useful for reducing serum cholesterol in a subject (including a mammal such as a mouse, rat, rabbit, cow, sheep, pig, human, monkey, ape, chimpanzee or orangutan); for treating coronary artery disease, dysbetalipoproteinemian or atherosclerosis; and for reducing the risk of myocardial infarction or stroke; for breaking an embolus in the subject; and also for treating angina. The synthetic apolipoprotein-E minicking polypeptide enhances binding of low-density lipoprotein (LDL) or very low density lipoprotein (VLDL), to a cell and enhances degradation of LDL or very low to be a cell. This sequence represents a synthetic apolipoprotein-E Gaps mimicking polypeptide has the following activities: antilipaemic, .; 0 100.0%; Score 98; DB 8; Length 18; 100.0%; Pred. ```
The invention relates to a novel synthetic apolipoprotein-E mimicking polypeptide. The invention further comprises an isolated nucleic acid encoding the synthetic apolipoprotein-E mimicking polypeptide; a vector, a host cell, a recombinant cell or a transgenic, non-human subject (including animal or plant) comprising the synthetic apolipoprotein-E mimicking polypeptide encoding polynucleotide; a composition comprising
                                                                                                                                                                                                 Synthetic apolipoprotein-E mimicking polypeptide related R18L peptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Synthetic apolipoprotein-E mimicking polypeptide useful for treating coronary artery disease, dysbetalipoproteinemia or atherosclerosis comprises an amino acid sequence.
                                                                                                                                                                                                                           apolipoprotein-E mimicking polypeptide; antilipaemic; cardiant; vasotropic; antiarteriosclerotic; cerebroprotective; antianginal; serum cholesterol; coronary artery disease; dysbetalipoproteinaemia; atherosclerosis; myocardial infarction; stroke; embolus; angina; low-density lipoprotein; LDL; very low density lipoprotein; LDL;
                                                                                                                                                                                                                                                                                                                                                                                     'note= "N-terminal acetyl"
                                                                                                                                                                                                                                                                                                                                                                                                                   /note= "C-terminal amide"

The invention relates to a novel synthetic apolipoprotein-E mimicking polypeptide. The invention further comprises an isolated nucleic acid encoding the synthetic apolipoprotein-E mimicking polypeptide; a vector, a host cell, a recombinant cell or a transgenic, non-human subject (including animal or plant) comprising the synthetic apolipoprotein-E mimicking polypeptide encoding polypucleotide; a composition comprising the synthetic apolipoprotein-E mimicking polypeptide and a carrier; and an monoclonal antibody that specifically binds to the synthetic apolipoprotein-E mimicking polypeptide. The synthetic apolipoprotein-E mimicking polypeptide has the following activities: antilipaemic, cardiant, vasotropic, antiarteriosclerotic, cerebroprotective, and

Claim 4; SEQ ID NO 131; 79pp; English.

the synthetic apolipoprotein-E mimicking polypeptide and a carrier; and an monoclonal antibody that specifically binds to the synthetic apolipoprotein-E mimicking polypeptide. The synthetic apolipoprotein-E mimicking polypeptide has the following activities: antilipaemic, cardiant, vasotropic, antiareriosclerotic, cerebroprotective, and antiargainal. The synthetic apolipoprotein-E mimicking polypeptide is useful for reducing serum cholesterol in a subject (including a mammal cub as a mouse, rat, rabbit, cow, sheep, pig, human, monkey, ape, chimpanzee or orangutan); for treating coronary artery disease, chimpanzee or orangutan); for breaking and for reducing the risk of myocardial infarction or stroke; for breaking an embolus in the subject; and also for treating angina. The synthetic apolipoprotein-E mimicking polypeptide enhances binding of low-density lipoprotein (LDL) or very low density lipoprotein (LDL) to a cell and enhances degradation of LDL or VLDL by a cell. This sequence represents a synthetic apolipoprotein-E mimicking polypeptide of the invention.

apolipoprotein-E mimicking polypeptide. The synthetic apolipoprotein-E mimicking polypeptide has the following activities: antilipaemic, cardiant, vasotropic, antiatteriosclerotic, cerebroprotective, and antianginal. The synthetic apolipoprotein-E mimicking polypeptide is useful for reducing serum cholesterol in a subject (including a mammal such as a mouse, rat, rabbit, cow, sheep, pig, human, monkey, ape, chimpanzee or orangutan); for treating coronary artery disease, chimpanzee or orangutan); for treating coronary artery disease, and also for treating angina. The synthetic apolipoprotein-E mimicking consisty lipoprotein-E mimicking of low-density lipoprotein-E mimicking chances binding of low-density lipoprotein (LDL) or very low density lipoprotein (VLDL) to a cell and enhances degradation of LDL or VLDL by a cell. This sequence represents a synthetic apolipoprotein-E mimicking polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to a novel synthetic apolipoprotein-E mimicking polypeptide. The invention further comprises an isolated nucleic acid encoding the synthetic apolipoprotein-E mimicking polypeptide, a vector, a host cell, a recombinant cell or a transgenic, non-human subject (including animal or plant) comprising the synthetic apolipoprotein-E mimicking polypeptide encoding polymucleotide, a composition comprising the synthetic apolipoprotein-E mimicking polypeptide and a carrier; and an monoclonal antibody that specifically binds to the synthetic apolipoprotein-E apolipoprotein-E mimicking polypeptide. The synthetic apolipoprotein-E
                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Synthetic apolipoprotein-E mimicking polypeptide useful for treating coronary artery disease, dysbetalipoproteinemia or atherosclerosis comprises an amino acid sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                apolipoprotein-E mimicking polypeptide; antilipaemic; cardiant; vasotropic; antiarteriosclerotic; cerebroprotective; antianginal; serum cholesterol; coronary artery disease; dysbetalipoproteinaemia; athorosclerosis; myocardial infarction; stroke; embolus; angina; low-density lipoprotein; LDL; very low density lipoprotein; ULDL.

mimicking polypeptide has the following activities: antilipaemic, cardiant, vasotropic, antiarteriosclerotic, cerebroprotective, and antianginal. The synthetic apolipoprotein. E mimicking polypeptide is useful for reducing serum cholesterol in a subject (including a mammal such as a mouse, rat, rabbit, cow, sheep, pig, human, monkey, ape, chimpanzee or orangutan); for treating coronary artery disease, dysbetalipoproteinedmenia or atherosclerosis; and for reducing the risk of myocardial infarction or stroke; for breaking an embolus in the subject, and also for treating angina. The synthetic apolipoprotein. E mimicking polypeptide enhances binding of low-density lipoprotein (LDL) or very low density lipoprotein (VLDL) to a cell and enhances degradation of LDL or VLDL by a cell. This sequence represents a synthetic apolipoprotein. E mimicking mimicking polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to a novel synthetic apolipoprotein-E mimicking polypeptide. The invention further comprises an isolated nucleic acid encoding the synthetic apolipoprotein-E mimicking polypeptide, a vector, a host cell, a recombinant cell or a transgenic, non-human subject (including animal or plant) comprising the synthetic apolipoprotein-E mimicking polypeptide and comprising the synthetic apolipoprotein-E mimicking polypeptide and a carrier; and an monoclonal antibody that specifically binds to the synthetic apolipoprotein-E mimicking polypeptide.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Synthetic apolipoprotein-E mimicking polypeptide useful for treating coronary artery disease, dysbetalipoproteinemia or atherosclerosis comprises an amino acid sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    apolipoprotein-E mimicking polypeptide; antilipaemic; cardiant; vasotropic; antiarteriosclerotic; cerebroprotective; antianginal; serum cholesterol; coronary artery disease; dysbetalipoproteinaemia; atherosclerosis; myocardial infarction; stroke; embolus; angina; low-density lipoprotein; LDL; very low density lipoprotein; LDL;

antianginal. The synthetic apolipoprotein-E minicking polypeptide is useful for reducing serum cholesterol in a subject (including a mammal such as a mouse, rat, rabbit, cow, sheep, pig, human, monkey, ape, chimpanzee or orangutan); for treating coronary artery disease, dysberalipoproteinaemia or atherosclerosis; and for reducing the risk of myocardial infarction or stroke; for breaking an embolus in the subject; and also for treating angina. The synthetic apolipoprotein-E minicking polypeptide enhances binding of low-density lipoprotein (LDL) or very low density lipoprotein (LDL) to a cell and enhances degradation of LDL or mimicking polypeptide of the invention.

Synthetic apolipoprotein-E mimicking polypeptide useful for treating coronary artery disease, dysbetalipoproteinemia or atherosclerosis comprises an amino acid sequence.

Claim 4; SEQ ID NO 127; 79pp; English.

The invention relates to a novel synthetic apolipoprotein-E mimicking polypeptide. The invention further comprises an isolated nucleic acid encoding the synthetic apolipoprotein-E mimicking polypeptide; a vector, a host cell, a recombinant cell or a transgenic, non-human subject (including animal or plant) comprising the synthetic apolipoprotein-E mimicking polypeptide encoding polypucleotide; a composition comprising the synthetic apolipoprotein-E mimicking polypeptide and a carrier; and an monoclonal antibody that specifically binds to the synthetic and apolipoprotein-E mimicking polypeptide. The synthetic apolipoprotein-E mimicking polypeptide has the following activities: antilipaemic, cardiant, vasotropic, antiarteriosclerotic, cerebroprotective, and

The invention relates to a novel synthetic apolipoprotein-E mimicking polypeptide. The invention further comprises an isolated nucleic acid encoding the synthetic apolipoprotein-E mimicking polypeptide; a vector, a host cell, a recombinant cell or a transgenic, non-human subject (including animal or plant) comprising the synthetic apolipoprotein-E mimicking polypeptide encoding polymucleotide; a composition comprising the synthetic apolipoprotein-E mimicking polypeptide and actrier; and an monoclonal antibody that specifically binds to the synthetic apolipoprotein-E mimicking polypeptide and activities and mimicking polypeptide has the following activities: antilipaemic, cardiant, vasotropic, antiarteriosclerotic, cerebroprotective, and antianginal. antianginal. The synthetic apolipoprotein-E mimicking polypeptide is useful for reducing serum cholesterol in a subject (including a mammal such as a mouse, rat, rabbit, cow, sheep, pig, human, monkey, ape, chimpanzee or oranguten); for treating coronary artery disease, dysbetalipoproteinaemia or atherosclerosis; and for reducing the risk of myocardial infarction or stroke, for breaking an embolus in the subject, and also for treating angina. The synthetic apolipoprotein-E mimicking polypeptide enhances binding of low-density lipoprotein (LDL) or very low density lipoprotein (VLDL) to a cell and enhances degradation of LDL or WLDL by a cell. This sequence represents a synthetic apolipoprotein-E mimicking mimicking polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               apolipoprotein-E mimicking polypeptide; antilipaemic; cardiant; vasotropic; antiarteriosclerotic; cerebroprotective; antianginal; serum cholesterol; coronary artery disease; dysbetalipoproteinaemia; atherosclerosis; myocardial infarction; stroke; embolus; angina; low-density lipoprotein; LDL; very low density lipoprotein; UDL;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Synthetic apolipoprotein-E mimicking polypeptide useful for treating coronary artery disease, dysbetalipoproteinemia or atherosclerosis comprises an amino acid sequence.

useful for reducing serum cholesterol in a subject (including a mammal such as a mouse, rat, rabbit, cow, sheep, pig, human, monkey, ape, chimpanzee or orangutan); for treating coronary artery disease, dysbetalipoproteinaemia or atheroclerosis; and for reducing the risk of myccardial infarction or stroke; for breaking an embolus in the subject; and also for treating angina. The synthetic apolipoprotein-E mimicking polypeptide enhances binding of low-density lipoprotein (ULDL) or very low density lipoprotein (VLDL) to a cell and enhances degradation of LDL or VLDL by a cell. This sequence represents a synthetic apolipoprotein-E mimicking polypeptide of the invention.

Synthetic apolipoprotein-E mimicking polypeptide useful for treating coronary artery disease, dysbetalipoproteinemia or atherosclerosis comprises an amino acid sequence. Claim 4; SEQ ID NO 129; 79pp; English.

The invention relates to a novel synthetic apolipoprotein-E mimicking polypeptide. The invention further comprises an isolated nucleic acid encoding the synthetic apolipoprotein-E mimicking polypeptide; a vector, a host cell, a recombinant cell or a transgenic, non-human subject (including animal or plant) comprising the synthetic apolipoprotein-E mimicking polypeptide acomposition comprising the synthetic apolipoprotein-E mimicking polypeptide and a carrier; and an monoclonal antibody that specifically binds to the synthetic apolipoprotein-E apolipoprotein-E mimicking polypeptide. The synthetic apolipoprotein-E mimicking polypeptide. The synthetic apolipoprotein-E cardiant, vasotropic, antiarteriosolerotic, cerebroprotective, and antiandinal. The synthetic apolipoprotein-E mimicking serum cholesterol in a subject (including a mammal

```
The invention relates to a novel synthetic apolipoprotein-E mimicking polypeptide. The invention further comprises an isolated nucleic acid encoding the synthetic apolipoprotein-E mimicking polypeptide; a vector, a host cell, a recombinant cell or a transgenic, non-human subject (including animal or plant) comprising the synthetic apolipoprotein-E mimicking polypeptide encoding polynucleotide; a composition comprising the synthetic apolipoprotein-E mimicking polypeptide and arribody that specifically binds to the synthetic apolipoprotein-E mimicking polypeptide. The synthetic apolipoprotein-E mimicking polypeptide as the following activities: antilipaemic, and antianteriosclerotic, cerebroprotective, and carrieriaclectoric, cerebroprotective, and carrieriaclectoric as untianginal. The synthetic apolipoprotein-E mimicking polypeptide is untianginal. The synthetic apolipoprotein-E mimicking polypeptide is untianginal as a mouse, rat, rabbit, cow, sheep, pig, human, monkey, ape,
                                                                                                                                                                                                                                                                                              ö
           chimpanzee or orangutan); for treating coronary artery disease, dysbetalipoproteinaemia or atherosclerosis; and for reducing the risk of myocardial infarction or stroke; for breading an embolus in the subject, and also for treating angina. The synthetic apolipoprotein-E mimicking polypeptide enhances binding of low-density lipoprotein (LDL) or very low density lipoprotein (VLDL) to a cell and enhances degradation of LDL or VLDL by a cell. This sequence represents a synthetic apolipoprotein-E mimicking mimicking polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Synthetic apolipoprotein-E mimicking polypeptide useful for treating coronary artery disease, dysbetalipoproteinemia or atherosclerosis comprises an amino acid sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                vāsotropic; antiarteriosclerotic; cerebroprotective; antianginal; serum cholesterol; coronary artery disease; dysbetalipoproteinaemia; atherosclerosis; myocardial infarction; stroke; embolus; angina; low-density lipoprotein; LDL; very low density lipoprotein; VLDL.

Synthetic apolipoprotein-E mimicking polypeptide useful for treating coronary artery disease, dysbetalipoproteinemia or atherosclerosis comprises an amino acid sequence.

Claim 4; SEQ ID NO 21; 79pp; English

The invention relates to a novel synthetic apolipoprotein-E mimicking polypeptide. The invention further comprises an isolated nucleic acid encoding the synthetic apolipoprotein-E mimicking polypeptide; a vector, a host cell, a recombinant cell or a transgenic, non-human subject (including animal or plant) comprising the synthetic apolipoprotein-E mimicking polypeptide encoding polymenticle is a composition comprising the synthetic apolipoprotein-E mimicking polypeptide and a carrier; and an monoclonal antibody that specifically binds to the synthetic apolipoprotein-E mimicking polypeptide and a carrier; and an monoclonal antibody that specifically binds to the synthetic and activities antilippement. C apolipoprotein-E mimicking polypeptide has the following activities: antilipaemic, cardiant, vasotropic, antiarteriosclerotic, cerebroprotective, and antianginal. The synthetic apolipoprotein-E mimicking polypeptide is antiarteriosclerotic, cerebroprotective, and antianginal. The synthetic apolipoprotein-E mimicking polypeptide is useful for reducing serum cholesterol in a subject (including a mammal such as a mouse, rat, rabbit, cow, sheep, pig, human, monkey, ape, chimpanzee or orangutan); for treating coronary artery disease,

The invention relates to a novel synthetic apolipoprotein-E mimicking polypeptide. The invention further comprises an isolated nucleic acid encoding the synthetic apolipoprotein-E mimicking polypeptide; a vector, a host cell, a recombinant cell or a transgenic, non-human subject (including animal or plant) comprising the synthetic apolipoprotein-E mimicking polypeptide encoding polypudleotide; a composition comprising the synthetic apolipoprotein-E mimicking polypeptide and a carrier; and an monoclonal antibody that specifically binds to the synthetic apolipoprotein-E mimicking polypeptide. The synthetic apolipoprotein-E mimicking polypeptide and a carrier; and apolipoprotein-E mimicking polypeptide activities: antilipaemic, cardiant, vasotropic, antiatreriosclerotic, cerebroprotective, and antianginal. The synthetic apolipoprotein-E mimicking polypeptide is

dysbetalipoproteinaemia or atherosclerobis; and for reducing the risk of myocardial infarction or stroke, for breaking an embolus in the subject; and also for treating angina. The synthetic apolipoprotein. Emimicking polypeptide enhances binding of low-density lipoprotein (LDL) or very low density lipoprotein (VLDL) to a cell and enhances degradation of LDL or VLDL by a cell. This sequence represents a synthetic apolipoprotein. Emimicking polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Synthetic apolipoprotein-E mimicking polypeptide useful for treating coronary artery disease, dysbetalipoproteinemia or atherosclerosis comprises an amino acid sequence.
                                                                                                                                                                          Gaps

useful for reducing serum cholesterol in a subject (including a mammal such as a mouse, rat, rabbit, cow, sheep, pig, human, monkey, ape, chimpanzee or orangutan); for treating coronary artery disease, dysbetalipoproteinaemia or atherosclerosis; and for reducing the risk of myocardial infarction or stroke; for breaking an embolus in the subject, and also for treating angina. The synthetic apolipoprotein. E mimicking polypeptide enhances binding of low-density lipoprotein (ULD) or very low density lipoprotein (VLDL) to a cell and enhances degradation of LDL or VLDL by a cell. This sequence represents a synthetic apolipoprotein. E mimicking polypeptide of the invention.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
